- * Dropper Seat Post Cable Routing
- * H2O Bottle Mounts
- * Direct Mount Front Derailleur
- * INTENSE "FLK-GRD" Down Tube And Chain Stay Protector System
- * Angular Contact Bearing / Collet Axle System With Replaceable Zirk Fittings
- * Available Colors Are: Naked Red
- * 5.0 Lbs. Frame Weight (Medium Size) W / Fox Kashima RP23

MEET THE CARBINE SL - Carbon Fiber With an American Attitude

Introducing the Carbine SL: the newest addition to Intense Cycles' exciting line of carbon fiber frames. Weighing in around the 5 lb. mark and offering cool features like titanium bolts and a carbon fiber shock link, The Carbine SL delivers an exceptional ride for racers and enthusiasts alike.

"I have personally had the pleasure of riding this bike for 3 months now, and loved every minute of it", says Intense Marketing Manager, Scott Sharples. "The SL gives me the ability to charge up steep, technical hills and then bomb the downhill."

Intense designer, Jeff Steber, chose higher modulus carbon fiber to save weight and retain strength. He also added dedicated 135mm dropouts and an adjustable 4.75-5.25 inches of plush, efficient, VPP suspension. The SL hits the aggressive XC/Trail segment with a 68 degree head angle, low stance and light weight. Once again we joined forces with German design & engineering specialists SEED Engineering to create another Carbon Fiber masterpiece. Available as frame or with Shimano XT / Fox build kit
